
ASSIGNMENT 3: 500PX + GOOGLE MAPS

ASSIGNMENT

- ▶ This assignment will be a combination of the Google Maps API and the 500px API, very similar to the last assignment.
- ▶ Create an app that shows a map centred on downtown Toronto, and an input search box for the user.
- ▶ When the user enters a search, use the "term" and "geo" query params to only return photos within 50km of downtown Toronto.
- ▶ For each photo returned, place a marker on the maps. Add an info window to the marker that shows the photo and some information about the photo when the user clicks on the marker.
- ▶ You will use the same /photos/search endpoint as in Assignment 2, just adding the geo term to limit results to Toronto.
